

Office Interiors

Bring your space to life

Murals are ideal for creating atmosphere and livening up ordinary bland spaces. Photographs and patterns can be printed to add interest to an office wall, work space or cafeteria. Wallcoverings can be generated to highlight products for showrooms or retail spaces. Continue brand consistency through your premises with custom designed and printed theming for all surfaces. We have solutions for glass, floors, walls, desks and ceilings. Size is no obstacle, our printers can cater for the smallest to largest of requirements. Any space can incorporate theming and it doesn't have to be permanent. If it's only a short term project we can produce graphics on cost effective materials which have a clean and easy removal.

Techniques

Wallpaper

A pre-pasted wallpaper product which you hang like standard wall paper. Can be re-wet and removed when required.

Self Adhesive Vinyl

Ideal for both long and short term use on new or existing surfaces. These films come in a textured, matte or gloss finish. Clear films are an effective option for glass.

Banner

PVC and PVC free banner is great for cost effective wall murals. It can be stretched around frames or over panels to create murals of any size. It's a good option where your wall surface is uneven.

Fabrics

These materials, some including adhesive backings, are used when a textured finish is required. They have a more up-market appearance.

Solid Panels

Direct printing or applying vinyl to panels is another alternative where walls are not suitable for wallpaper or adhesive films.

Frosting / Etching

These self adhesive films are designed to decorate glass and windows and provide privacy. Typically decorative borders are used for health and safety compliance, and these can incorporate company logos or designs to match branding. Frosted films come in colours and can also be printed with images. Full windows can be completely covered.

Window Films

Ideal where you need an image on a window for short term promotions or permanent installations. We provide vinyl cut lettering or digital full colour graphics to any size.

One Way Window Film

This film is more popular with vehicle graphics, but is equally effective on building windows. It works when the light source outside is brighter than that inside. The image is seen by those on the street while a clear view out is visible from inside.

Ceiling Tiles

Ceiling tiles are direct printed. Large areas are tiled into individual panels to account for the grid dividers.
